Student	Placement company	Placement coach
Name: Tatenda Nyemudzo Address: 10 Oatlands drive , Greystone park , Harare ,Zimbabwe	Company: Paynow Company supervisor: Takudzwa Sisimayi Address: 27 Argyll road Newlands , Harare , Zimbabwe .	Name: John Bos
Tel: +263781497764 E-mail: tatenda.nyemudzo@student.nhlstenden.com	Tel: +263719646741 E-mail: takudzwa@paynow.co.zw	Tel: E-mail: john.bos@nhlstenden.com
Length in days: 91 Starting date: February 2nd End date: June 8th Date of first internship visit/interview with internship tutor: 13TH OF FEBRUARY Date final interview with internship tutor Propeduse obtained: Yes 45 EC achieved in the main phase: Yes		
Date and signature:  23 MARCH 2026	Date and signature:	Date and signature:

The above three parties agree to an internship placement of the student on the Bachelor of Applied Sciences CMD, which include work, starting times and duration of the internship period. Within the intern period, the rules described in the Stage guide CMD. After signing by all parties, keep this document and submit it at the end of your internship via a special link.

This document consists of three parts:

- Your personal- and placement details.
- Plan of action: what are the tasks you will be carrying out during your placement period. This plan is a description of your placement activities.
- A survey of competencies you will be working at during your placement: obligatory placement competencies and elective competencies.

Your competency profile is based on the obligatory competencies, on competencies you wish to work at during your placement and competencies related to the placement assignment. These last two categories you include in the part: elective competencies

You draw up your placement plan in consultation with placement coach and company supervisor. The definitive version will be signed during the coach's first placement visit. Guidelines can be found on the CMD website-Info-Stage.

Plan of action

Here you indicate how and when you work at the competencies during your placement.

Description of placement assignment
During my placement at Paynow, I Will work as a Full Stack Developer Intern within the product engineering team. My primary focus will be shipping full stack applications that interface with Paynow's core infrastructure, including payment processing, merchant management, and settlement systems. I will build and deliver end-to-end features across both backend services and frontend interfaces.
My activities will focus on designing, building, and shipping production-grade applications that integrate with Paynow's core platform infrastructure. Working within an Agile development environment, I will take features from concept to deployment — connecting frontend interfaces to backend services and core payment systems. Development across the full stack allows me to work toward my competency profile in the domains To Create, To Learn, To Communicate, To Organise, and To Research, which form the foundation of my placement goals.

Internship Competences:

Number of compulsory European Credits: 15 (of a maximum of 30 ECs for the entire internship) Choose an additional 15 ECs in elective competences. (Note: a maximum of 15 EC per competency and no Level 1 or 3 or 'mandatory' competencies). For more information check out the pink booklet.

Create learning goals for every competency, fitting with the ECTS chosen.

To Create

L2

Compulsory 6 ECTS.

Choice: 6ECTS

Learning goal: **By the end of my placement, I will have shipped at least one full stack application at Paynow that interfaces with core platform infrastructure (e.g. payment processing, merchant management, or settlement), is deployed to production, and handles real user traffic.**

This includes:

- Building end-to-end features connecting frontend UIs to backend APIs and core Paynow systems
- Designing and implementing RESTful or event-driven integrations with core infrastructure
- Building merchant-facing or internal dashboards and tools
- Writing automated tests and managing deployments through CI/CD pipelines
- Applying secure coding practices appropriate to a fintech environment

To Learn L2 Compulsory 3 ECTS (Maximum amount for internship)

Learning goal 1: **By the end of my placement, I will demonstrate that I can operate effectively in a professional fintech development environment by mastering Paynow's tech stack and adapting my academic development methods to enterprise-level constraints through regular reflection and feedback cycles.**

This includes:

- Learning internal frameworks and tooling.
- Participating in Agile sprints.
- Holding bi-weekly reflection sessions.
- Adjusting technical designs based on regulatory and business realities.
-

To Communicate L2 Compulsory 3 ECTS. Choice: 3 ECTS

Learning goal 1: **By the end of my placement, I will communicate technical work clearly to both technical and non-technical stakeholders by producing professional documentation, presenting sprint updates, and explaining system trade-offs in business-relevant terms.**

This includes:

- Writing API or feature documentation.
- Updating stakeholders during sprint ceremonies.
- Translating technical complexity for support or product teams.
- Documenting design decisions.
-

To Organise

L2

Compulsory 3 ECTS.

Choice: N/A

Learning goal 1: **By the end of my placement, I will independently manage my development workflow within Paynow's Agile environment by planning tasks, tracking progress, meeting sprint deadlines, and adjusting priorities based on feedback.**

This includes:

- Breaking work into subtasks.
- Estimating delivery time.
- Using sprint boards.
- Monitoring productivity.
- Taking ownership of deliverables.

To Research

L2

Not compulsory.

Choice: 6ECTS

Learning goal 1: **By the end of my placement, I will conduct a structured technical investigation into a system improvement opportunity at Paynow, apply professional research methods, and present a data-driven recommendation to senior engineers.**

This includes:

- Identifying a performance or architecture issue.
- Collecting system metrics.
- Prototyping solutions.
- Evaluating results.
- Writing a recommendation report.
- Presenting findings.
